The Archway Investment Fund - Fixed Income Portfolio Bryant University

Monthly Report Data as of 2/29/2024

Fund Objective

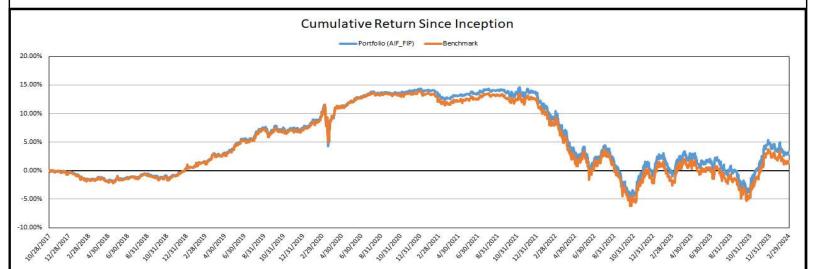

The primary objective of the Archway Investment Fixed Income Fund (the Fund) is to provide students in Bryant University's Fixed Income Portfolio Management course with a hands-on learning experience. The Fund launched on October 27, 2017 with \$500,000. After including subsequent capital inflows and outflows, the net capital contribution is \$815,000.

Investment Strategy

The Fund seeks returns from income and price appreciation, in excess of its Benchmark, while maintaining a volatility less than 120% of that of its Benchmark. The Benchmark was changed from the Fixed Income ETF GVI to the Fixed Income ETF AGG, which broadly tracks the Bloomberg Barclays Aggregate Index, on September 30, 2021. That index includes fixed rate debt securities priced in USD and traded in the US market, that are issued by the U.S. Treasury, U.S. government agencies, U.S. corporations, and taxable debt issued by sovereign, supranational and local government entities rated investment grade. It also includes highly rated MBS, CMBS and ABS securitized credit tranches. The benchmark was chosen for its diversification, and its use as a benchmark for both active and passive core fixed income portfolios. The tracking error of the portfolio versus its benchmark, defined as the annualized standard deviation of excess returns, is kept below 2%. Historical benchmark return and risk metrics use a chained return series reflecting the benchmark in use at the time.

Performance Commentary

The Archway Fixed Income Portfolio returned -1.40% during February, while the benchmark returned -1.47%. While the Fed did not meet in February, there were many economic indicators that revealed that rate cuts may be pushed backed even farther into 2024. While U.S. manufacturing rebounded over the month, a strong labor market persisted. CPI and PCE reports supported the Feds unwavering patience, while consumer sentiment fell. The market reacted to these indicators by pushing rates higher. Treasury yields increased by an average of 31 bps across the whole curve, with notable moves in the 2-year (+41 bps), 3-year (+43 bps) and 5-year (+40 bps) yields. At month end, the duration of the portfolio was +0.01 years longer than the benchmark; it was 0.07 years short in the first half of the month before several trades were executed after a cash inflow of \$35,000 on February 15. The portfolio ended the month +0.01 years higher at both the 6-month and 1-year points on the curve, -0.06 years lower at the 2-year point of the curve, -0.07 years at both the 3 and 5-year points of the curve, +0.09 years higher at the 7-year point on the curve, +0.04 higher at the 10-year point, +0.08 years higher at the 20-year point, and -0.02 years lower at the 30-year point on the curve, +0.04 years contributed 0.03% and 0.02% in alpha for the month. Throughout February, investment grade corporate spreads tightened by 3 bps, but high yield loan spreads tightened by 38 bps and high yield bond spreads tightened by 31 bps. Agency spreads tightened by 2 bps and MBS spreads widened by 3 bps. The portfolio has returned -1.53%, while the benchmark returned -1.62%. Since its inception in October 2017, the portfolio has had an annualized return of 0.51% and outperformed the benchmark by 0.25%. Unless there is a downturn in the labor market, we believe that the Fed will keep its policy rate at its current level through the end of the semester. Our relatively neutral duration, curve, and sector allocation exposures reflect a view that spreads are fai
