

U. S. ARMY AIR FORCES  
MAXWELL FIELD, ALA.

Friday  
2100

Dear Mom,

This will have to be short and sweet, honey. Boy this schedule is something. I'm on the go from six to nine-thirty. All my courses now consist of Naval Identification, Code, Maps and Charts, and Physics, and they're quite a bit tougher than I have my first. In N.I. we have two seconds to identify the ships. Those hairy boats look all alike to me. The taking eight words a minute now in code plus five words a minute by visual or light flashes. Man that's rare. If you watch the

light you ~~can't~~ see where  
you write the figures, and  
if you watch the figures  
you can't see the light, great  
fun, eh? The Maps and  
Charts is a very interesting  
course, where we learn to  
construct, read, and plot  
courses on maps. The  
Physics is the same old  
stuff I had in high  
school and C.T.V.

Tell Jody, Bob, and Nan that  
I'll write them soon. Really  
now, I've got no time,  
I have hardly time to read  
the letters much less write them.  
But keep writing honey, you  
have no idea how much I  
enjoy all your letters, the  
more the merrier. I love you  
with all my heart, goodnight sweetheart.  
Luv
